(1) by      (2) door      (3) fixed      (4) had      (5) her      (6) the

4 英文を読んで設問に答えなさい。

At Queen Mary University of London, researchers are using new AI tools to create music in virtual worlds. Doctoral students Andrea Martonelli and Max Graf, with senior lecturer Mathieu Barthet, are exploring generative AI and creative technology. They've set up a modern studio where music and technology ( 1-a ). They are looking for ways to use AI to help people create new kinds of music.

Graf showed reporters a virtual instrument ( 1-b ) Netz, played with a virtual reality headset that tracks movements to make music. Martonelli played the HITar, a guitar with AI sensors that detect motion to ( 1-c ) drum-like sounds, which a regular guitar can't make.

②AI has been used in music since the 1950s, but recent advances in generative AI have led to different opinions. This technology, known from tools like ChatGPT, can make sounds, lyrics, or full songs. However, most artists use simpler AI to improve their music. British musician Yungblud thinks AI can help explore new styles, while others, like Amy Love of Nova Twins, worry about AI voices—especially those of real or deceased artists.

In November 2024, the Beatles released their last song, "Now and Then," with John Lennon's voice re-created using AI from an old recording. Warner Music also said it would use AI to recreate Edith Piaf's voice. Experts have legal and ethical concerns about AI, but rules are still being worked on. Barthet believes AI can help in music production if ( 3 ).
